E-Mail Images

The first method of downloading images is by e-mail. This is usually the quickest way because many people have Internet access and e-mail is already a part of everyday life.

Like the full version, you can import and edit digital photographs, adjust image colors, lighten and darken photographs, crop images, merge multiple images, apply color and style effects, and more. You can also

create artwork for a web site, product advertisement or even comic book. The program's interface is easy to use. All of the program's tools are available on a single desktop. You can import and open existing photos, adjust image colors, lighten

and darken
photographs, crop
images, merge multiple
images, apply color
and style effects, and
more. The program's
interface is easy to use.
Most of the features
are the same as those in
the professional
version of Photoshop.
The program contains

all of the same tools,
such as Spot Healing,
Spot Healing Brush,
Exposure, Levels,
Curves, and more.

Q: How to apply style to Html page by a js function I have a piece of code that I want to apply a class with a given font size to a given id. I already wrote the function that will make the id changes, and the class

```
changing. function
addClass(myID,
myClass, myFont) {
var myClasses = docu
ment.getElementById(
myID).classList; var
myFonts = document.g
etElementById(myID).
getAttribute("font-
size"); myClasses.add(
myClass); myClasses.a
dd(myClass); myClass
```

```
es.remove(myClass);  
myClasses.remove(my  
Class); myClasses.add(  
myFont); myClasses.re  
move(myFont); docum  
ent.getElementById(m  
yID).classList.add(my  
Class); document.getEl  
ementById(myID).get  
Attribute("font-size").s  
etAttribute("font-size",  
myFont); } I have this
```

function inside a
button's onclick event.
That button is inside a
specific view of a
struts 1.3 page. I tried
giving the javascript
function (that is just a
function, NOT a
function in an object),
an ID and I think its
actually used it but it's
not. I tried to give it the

function name, and that's also not working. How to apply that style? Thanks A: Here is a function that will add an ID and then add the specified class:

```
function addClass(id,
className, fontSize) {
var idClasses = docum
ent.getElementById(id)
.classList; var
```

```
idFontSize = document
.getElementById(id).ge
tAttribute("font-size");
var classNameString =
className + " " +
idFontSize; idClasses.a
dd(className); idClass
es.add(className); id
Classes.remove(classN
ame); idClasses.remov
e(className); idClasse
s.add(idFontSize);
```

Q: Copy datagridview content from one form to another form and format the values my application has 2 forms. 1 that has a datagridview (DataGridView1). Form2 has an empty datagridview (DataGridView2).

Now the problem is.
How do I copy the
content of
DataGridView1 to
DataGridView2 as
long as all the rows are
still in form 1. I do not
want to move the data
to a file or object as I
want to be able to edit
the contents of my
datagridview1

whenever I want so I am not planning to move the data to a database. I have tried the following but it does not work. try {
DataTable dt = new
DataTable();
dt.Columns.Add("ID",
typeof(int)); dt.Column
s.Add("Task",
typeof(string)); dt.Colu

```
mns.Add("Completed",  
typeof(bool));  
DataRow dr1 =  
dt.NewRow();  
dr1["ID"] =  
myObject.ID;  
dr1["Task"] =  
myObject.Task;  
dr1["Completed"] =  
myObject.Completed;  
DataGridView1.DataSource = dt; //I get an
```

exception that ID is
already in use }
catch(Exception ex) {
MessageBox.Show(ex.
ToString()); } A: I
don't think this is an
issue of saving to disk
but instead copying the
data to a new
DataTable. You need
to create the DataTable
that you are going to

copy the data to and
assign this
