AutoCAD is free to use for individuals (home) or non-profit companies (commercial). Commercial companies can purchase licences to run AutoCAD on their computer servers for a fee. What is AutoCAD? AutoCAD is a computer aided design and drafting software application. It is typically used by architects, engineers, and other design professionals to create 2D and 3D drawings. In addition to the drafting features, it is an image-editing tool for creating technical illustrations (e.g. print and Web design). Because it is a native CAD application, it can be used to design 2D or 3D models, but not both at the same time. Although it was originally only intended to be used on desktop computer systems, version 15 introduced the ability to run it on mobile devices (iPhone and Android) and even on embedded devices such as tablets. The last version of AutoCAD is AutoCAD 2019. You can download it for free for a limited time. Read our review of AutoCAD 2019. "Draw" vs. "Design" In AutoCAD, the term "drawing" refers to a 2D representation of 3D objects. It is very common for a designer to work with 2D drawings that are then combined with other 2D drawings and 3D models to create 3D drawings (e.g. paper or web templates). When a 3D model is created, it will contain both 2D (2D CAD) and 3D (3D CAD) data. The term "design" refers to the design of an object or a project (e.g. a house). The design of an object includes: The sizes, shapes and orientations of the object's components (e.g. walls, roofs, floors, etc.). The colors, textures, materials, and other visual characteristics of the object. How to get started with AutoCAD? First, download and install AutoCAD. You can download and install AutoCAD on a Windows PC (home) or Mac, a web browser, or a mobile app. AutoCAD is a cross-platform CAD program, which means you can use it with a variety of devices. If you don't have a computer or computer hardware with AutoCAD, you can

Q: Determinant of $aI + bJ$, where $a,b \in \mathbb{R}$ How to compute the determinant of $aI + bJ$, where $a,b \in \mathbb{R}$? I have no idea to calculate it. Any help will be appreciated. A: Hint: If λ, μ are the eigenvalues of $aI + bJ$, then the determinant of $aI + bJ$ is $\det(aI + bJ) = \lambda a - b \mu$. Hint: $\det(aI + bJ) = \det\begin{pmatrix} a & -b \\ b & a \end{pmatrix} = a^2 - b^2$. 1. Field of the Invention The present invention generally relates to a fire suppression sprinkler system and, more particularly, to a novel spraying angle for a fire suppression sprinkler head. 2. Prior Art In fire sprinkler systems, there are typically several sprinkler heads arranged in different patterns throughout a building. Sprinkler heads may be mounted above or below ceiling panels or in wall cavities. One of the functions of a sprinkler head is to discharge a stream of water outwardly in a predetermined direction. Each sprinkler head is typically mounted to a supporting structure, such as a ceiling tile, ceiling grid,
