It is widely used in manufacturing, especially in designing plant floor plans for factories, and in civil engineering projects, especially in designing large-scale public works projects, such as dams, sewage plants, highways, and bridges. CAD vendors such as Siemens, HP, and the German product manufacturer Dassault sell their own proprietary products that use the same type of file format. Autodesk has also been a significant influence on architectural design software such as Rhino. Its influence is also seen in the fact that it is the most widely used drafting program in the construction industry in the United States and Canada.
