You can use Kruptos 2 Exchange on Windows 8 with ease, as it's a very stable solution that's also quite user-friendly. You can add files and folders with ease, and the process of creating an encrypted archive is also quite easy-to-use. The interface is clean and attractive with intuitive controls, and overall, we consider the software to be one of the best data protection tools you can use to secure your confidential files. The only thing that might be an issue is that you cannot import folders in PDF format, which is the feature the program is lacking at the moment. Kruptos 2 Exchange features several different modes of file encryption and the ability to add, edit and protect multiple files and folders simultaneously. When you start the tool, you need to select a directory to start adding files and folders in encrypted mode, and the process is also smart

More information at Introduction Cyber attacks are conducted using a variety of modern computing tools, meaning they are no longer the exclusive domain of the military. Anyone and everyone can become the victim of a cyber attack, especially as the nature of cyber threats continues to evolve. Why You're Not Safe at Home Alone While there is much that you can do in an effort to keep yourself and your family safe, the most important thing you can do is to never, ever be alone. Stay home with your family and neighbors, and encourage family and neighbors to do the same. For all the world seems so intertwined today, the effects of a cyber attack will be felt by your neighbors, friends, and business associates. While it's true that you can't necessarily expect your neighbor to assist you, it is a good idea to make yourself and your home visible and to demonstrate your ability to defend yourself. Secure Your Computer With a VPN In addition to staying home, your next best defense is to make sure that your computer is secure from cyber attack. There are many reasons you might want to encrypt your computer and mobile devices. The first is that you might lose your data in an emergency. The second is that you might want to disable your wireless and Wi-Fi connections to make it harder for snooping devices to eavesdrop on you. The third is that you might want to secure your Web browsing with a virtual private network (VPN) to make it harder to track where you travel. What is Cloud Computing?Cloud Computing is a new approach to delivering computing capabilities that have traditionally been provided on premise (by a data center or IT organization) or through the cloud on-demand using the Internet. What is Virtualization?Virtualization is the creation of a representation of any physical computing capability (such as a physical server, storage, network, or device) within the context of a virtualization platform and
